Art Unit: 1724

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-25, drawn to a composition and process for its production, classified in class 502, subclass 404.
- II. Claims 26-35, drawn to a process for removing an anionic contaminant from an aqueous solution, classified in class 210, subclass 670.

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case the product of Group I could be used in another process, different from that of Group II. For example, this material could be used in the manufacture of paper products. Alternatively, this material could be used as a filter for removing non-ionic contaminants (e.g. suspended solids) from a non-aqueous liquid (e.g. oil), or from a gas.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and divergent subject matter, and because the searches for the individual Groups are not coextensive, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Furthermore, if the invention of Group II is elected, then an election of species is also required.

Art Unit: 1724

This application contains claims directed to the following patentably distinct anionic contaminant species: (1) phosphate; and (2) arsenic. The species are independent or distinct because the chemical properties of phosphate and arsenic are significantly different from one another.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed anionic contaminant species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 26-29 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, Applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, Applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
